Campus Lost & Found System

Muhammad Hamza Sajid
F-24-BSSE-5A-028

Introduction, Problem & CCP Justification

Problem & Proposed System

Items get lost in chats; this app posts, matches, and verifies them.

Knowledge Depth

Needs OOP, file handling, and item-matching logic.

Conflicting Requirements

Details must be findable but private enough to stop false claims.

Stakeholders & Interdependence

Students, finders, and admins share linked posts and claims.

Benchmarking

Feature Aspect	Existing Approaches	Proposed System
Posting lost & found items	Yes	Yes
Searchable posts	Limited	Yes
Automatic item matching	No	Yes
Claim verification	Limited	Yes
Item status tracking	No	Yes
Admin moderation	Limited	Yes

KEY FINDING

Existing approaches let people post items, but offer little searching, matching, or claim verification.

Limited = partial or manual support in WhatsApp groups, notice boards, and Google Forms.

Proposed System Features & Architecture

Posting & Search

- Post lost and found items.
- Search by keyword and category.
- Student and Admin roles.

Matching & Claims

- Automatic match suggestions.
- Claim with a hidden question.
- Item status tracking.

ARCHITECTURE

Text menu → Python classes (User, Item, Claim) → JSON file storage

Tools & Technologies

Python 3

Classes for OOP: inheritance, abstraction, encapsulation, polymorphism.

Storage & Tools

JSON file storage, VS Code or IDLE, and Git/GitHub.
